

SAL3D Shape Analysis Library

SAL3D is a development suite comprising a set of easy to use tools for the development of powerful applications oriented based on the processing and analysis of organized 3D data or Clouds of Points. These tools are characterized by the speed, accuracy, and reliability that comes only from extensive experience in the field of 3D. SAL3D is offered to Machine Builders, system integrators, and volume end users demanding maximum flexibility and customization capabilities for their 3D machine vision system

Services: AQSENSE provides on-site and remote technological support to ensure a smooth integration and deployment of SAL3D library in the clients environments.

Technical consultancy and feasibility studies including the complete design of the Machine Vision 3D acquisition system to help through the first steps of the project. **Sophisticated 3D simulations** to avoid initial investments in hardware. **Customized software developments** for specific 3D applications. **Software integration** of SAL3D tools. **Training programs** to master 3D technologies and learn how to use SAL3D for the own needs.
